ROB BURGHARD
SPEAKER

TOPIC:

ARTIFICIAL ENERGY INTELLIGENCE

Energy is an important aspect of most processes around it. Therefore it is important to do this efficiently. Through artificial Energy Intelligence companies can save up to 30 percent on their energy consumption. The software combines time series with context and expert knowledge, learning the normal energy consumption in relation to other parameters, such as the weather conditions.

It is able to generate optimization insights and notice important deviations in energy consumption depending on the conditions. Rob Burghard, the CEO of the company that developed this software, will start his talk with the physical concepts underlying the measured parameters and make a link to CS and AI explaining the importance and relevance of Artificial Energy Intelligence and its workings.
